Iu-Mien video script summary:

My name Lai Saelee, I'm an interpreter at Harborview in Seattle. Today I am here to let everyone in the Iu-Mien community know I got my vaccine. After the first dose, the side effects for me were just a little headache and a sore arm that lasted a day and a half or two, and the effects were gone already. For each person's reaction, it may depend on their body. The vaccine side effects can cause fever, tiredness, nausea, sore arm, and muscle aches for a day or two. I got my second vaccine dose, and I only had a sore arm. I encourage our community to get the vaccine to protect themselves and the world and their families. The vaccine protects you from getting severe Covid-19. Still wear your masks for a better chance of not getting Covid. When you get the vaccine it protects you and your family and community. To save your life, please vaccinate. It's very important.
